Country: **Nigeria**

## Certificate Details

Applied Behaviour Analysis

[Score: 96]

## Course Details

This course covers Applied Behaviour Analysis (ABA) theories and techniques and how its methods like Matrix and Number Theory are employed in improving a child's language, cognitive, motor and visuospatial skills. It begins by introducing Applied Behaviour Analysis and explaining the Antecedent-Behaviour-Consequence (ABC) model – a guiding principle of ABA. The course proceeds to cover rules and foundational techniques of ABA. Next, illustrations are made of how ABA could improve motor skills and how methods like the Picture Exchange Communication System could improve language skills.

The second half of the course explains and demonstrates how ABA techniques like Matrix, Chaining, Follow the Rule, and Sequencing can be used to improve cognitive function in children with Autism. The course then introduces techniques like the Number Concept, Patterning, Gradation, and Block Design. It demonstrates with videos how these techniques can improve a child's visuospatial skills. The course concludes by teaching how to ensure teachings from ABA sessions could help a child when they face similar situations in real life.
